Re: Schreiber/Caravan Drum Site, Detroit, MI

Dear Mr. Nwabuzor,

After review of the analytical results you have provide me from post excavation sampling, it appears that contaminant levels meet the MDNR's Selected Type B Cleanup Criteria for soil. Analytical results of split samples collected by the US EPA Technical Assistance Team have also verified your data. It is my understanding that arrangements are being made to complete disposal of the stockpiled contaminated soil, and that site restoration will be completed by March 31, 1993, in accordance with the time frame extension of the Order.

If you have any questions or require additional information, please feel free to contact me.

Respectfully,

Peter Guria
On-Scene Coordinator
